- » **New Reports** - The number one request for the enhancements in Medisoft was to improve reports. Well, you asked; we listened! Medisoft now includes 300 new reports with everything from better aging reports to new pie charts and graphical reports. That's already 300 reasons to upgrade your old Medisoft!
- » **Default Printer Option** - Tired of clicking around just to print one document? Users can now specify default printers for many of the Medisoft Documents, including superbills, statements, reports and claims.
- » **Chart Number Hot-key** - New Shortcut! When moving from screen to screen, you can now recall the patient file with the click of a button, literally! (Hint: It's Shift +F4)
- » **Quick Ledger Edit Option** - Now, you can add and/or edit the patient notes for any transactions in the grid in both the Patient and Guarantor Ledger.
- » **Office Hours Enhancements-** The appointment entry window now shows both the home and cell phone numbers for the patient. Office Hours Professional will now warn you about upcoming appointments for a patient in the appointment entry window. The new Office Hours has a blank appointment indicator! Appointment Reports include blank appointment slots. All you have to do is select the 'Print Blank Appointments' box! Plus, you no longer have to enter an appointment for walk-in patients to be able to print a superbill. You can print as many blank superbills as you need!
- » **New Statement Management Features-** Medisoft now has a new remainder statement, which shows you that missed co-pays have been added into the total amount due in the statement. All you have to do check off the box in the Billing Tab under Program Options. You can also now sort statements either by date of service, entry order, or by document number, making statements easier than ever to find!
