New Flexible Grids for Claim Generation - Medisoft 16 increases claim generation flexibility that allows you to easily configure everything from your setup to generating claims. The key addition to the grids are the implementation of Practice, Provider, Referring Provider and Facility ID grids. The flexibility of the new grids ensures that you'll be able to create any number of different scenarios for any combination of insurance companies, insurance categories, facilities, providers, referring providers, and your practice, so that you can meet the requirements for any carrier.

Revenue Manager - With Revenue Manager, Medisoft 16 is fully equipped to handle every step of your claim process, from checking eligibility to posting ERA's. Revenue Manager tracks your claim throughout the entire process and keeps a history, giving you insight into your claim processing payment timeline. Plus, Revenue Manager checks your claims for errors before you send them and flags them to mark that revisions are needed, cutting out the unnecessary time it takes to receive and repair a claim rejection. When flagged for errors, Revenue Manager allows you to edit your claims with CCI and custom edits, before you send your claim, ensuring a higher claim acceptance rate and quicker payments from insurance providers.

Enhanced Data Flow between Medisoft 16 and Medisoft Clinical - Updates to Medisoft 16 include smoother data flow between your practice management and your EMR software. New controls in Communication Manager allow you to check if you transmit and receive appointment status updates. Communication Manager also includes enhanced library resources to Medisoft like provider, facility, procedures and diagnosis updates. Also, when a patient changes his or her insurance data, the information you enter into Medisoft Practice Management will automatically update the Insurance Maintenance table in Medisoft Clinical.

New Interface - With version 16, Medisoft receives a face lift that introduces modern ribbon interfacing with new colors, icons and window controls that make navigating the program easier.
